

AQUATOR TOUCH-SCREEN CONTROL SYSTEM

The new and innovative control system makes using the massage bath more comprehensive, accurate and responsive. All the appliances can be activated, regulated and monitored from one touch-sensitive screen with no misleading submenus. In addition, there is a large "STOP" button at the bottom, which immediately stops all working functions to avoid any potential difficulties in operating and increases comfort when you have finished using the bath. In the control system the use of text has been replaced with icons of different colours. This small change allows the control system to be used even without glasses, because users will still be able to distinguish large colour spots. The use of all control buttons on the edge of the bath has been removed.

The touch-screen control system can be used in all AQUATOR baths with different levels of equipment.

PNEUMATIC CONTROL SYSTEM

Pneumatic switches from Koller (country of origin: Austria) are an easy way to switch the massage systems of the bathtub on and off. Additionally, we offer mechanical switches to add air to the water flow of hydro-jets and smoothly open or close the back massage.

ELECTRONIC SWITCHING

Electronic switches from Koller (country of origin: Austria) have become the standard for massage bathtub driving systems not only in Europe but also for most of the world.
